## **LADDER SAFETY**

Ladders – it is likely that we have all used one at one time or another. We use ladders so often, both at home and at work, that ladder usage appears to be a rather common and safe practice. However, injury and fatality statistics tell a much different story. In Canada, thousands of people are injured or killed from using ladders every year, resulting in millions of dollars in claim costs. The average age of a person seriously injured or killed is 43 years old. Studies have also indicated that these incidents are related to abuse or misuse of ladders, and not from faulty manufacturing.

Understanding the importance of ladder safety and increasing the awareness about proper ladder use both on and off the job is critical in injury prevention.

### **Training Solution – Online *Ladder Safety* Course**

This 30 minute course will increase the awareness of ladder safety issues.

#### **Course Overview**

Upon completing *Ladder Safety*, participants will have received information pertaining to:

- Health and safety legislation
- The causes of injuries and accidents related to ladder use
- Ladder selection
- Types of portable ladders
- Materials and standards
- Setting up ladders
- Climbing a ladder safely.

#### **Online Course Offers Convenience and Efficiency**

These courses are powered by the **Link2eLearning** LMS (Learning Management System), so you can track course progress and completion. Each training solution provides quizzes, a final exam and a course completion certificate.

## **CONTENT OUTLINE**

### **1. Ladder safety**

- **Introduction**
- **Ladder legislation**
- **Overview**
- **Types of portable ladders**
- **Safety standards and material types**
- **Inspecting ladders**
- **Setting up an extension ladder**
- **Climbing the ladder**
- **Conclusion**
- **Final exam**
